

Linkage and Navigation Services

Contractor Webinar
April 27, 2015
Division of HIV/STD/HCV Prevention

April 27, 2015

Key Priority Areas

End of epidemic goals:

- Identifying persons with HIV who remain undiagnosed and linking them to health care;
- Linking and retaining persons diagnosed with HIV to health care and getting them on anti-HIV therapy to maximize HIV virus suppression so they remain healthy and prevent further transmission; &
- Facilitating access to Pre-Exposure Prophylaxis (PrEP) for high-risk persons to keep them HIV negative.

To Achieve Key Priority Areas:

AI Contracts
Focus on High
Impact HIV
Prevention
Programming

New Program Models

Comprehensive HIV/STD/HCV Prevention and Related Services for Populations Impacted by HIV/STD/HCV

Contractors funded by the Division of HIV/STD/HCV Prevention Services are required to select one program model below. **Listed service targets are minimum requirements for funding.**

Generic Program Model Options

Program Model #1 – HIV testing and linkage to prevention and HIV care services, linkage/navigation services for HIV+ and/or high risk negatives, linkage to STD testing & HCV screening, condom distribution, and 2 evidence based interventions for HIV+ and/or high risk negatives

Program Model #2 – HIV testing and linkage to prevention and HIV care services, linkage/navigation services for HIV+ and/or high risk negatives, condom distribution, 1 evidence based intervention for HIV+ and/or high risk negatives, and STD testing &/or HCV screening

Program Model #3 – Linkage to HIV/STD testing & HCV Screening, linkage/navigation services for HIV+ and/or high risk negatives, condom distribution, and 3 evidence based interventions for HIV+ and/or high risk negatives (or at least one HIV EBI for HIV+ clients)

HIV Testing and Linkage to Prevention & HIV Care Services

- Service Target: A minimum of [] HIV tests, annually
- Obtain a previously undiagnosed positivity rate of 2% annually
- All Program Models require 100% of high risk clients (MSM, IDU, and/or high-risk heterosexuals and/or STD/HCV positive clients) who receive HIV testing be connected to prevention services (e.g., evidence based interventions)/homegrown interventions, linkage and navigation services, **QIEP**, **PiEC**, STD testing &/or HCV screening.
- 60% of the [] high risk clients will be linked to needed services
- All Program Models require 100% of newly identified HIV-positive clients who receive their test result will receive linkage and navigation services and be promptly connected to medical care, partner services, prevention counseling, and offered testing/screening or referred for testing/screening for STDs and HCV
- Linkage to HIV Care Services and Evidence Based Intervention**
 - Anti-Retroviral Treatment and Access to Services (ARTAS): ARTAS is a public health strategy that can be used to fulfil all or part of the linkage and navigation services program-models requirement.

For contractors not providing HIV testing: Link high risk clients for HIV, STD testing and HCV screening

[] = Minimum number of clients will vary depending on specific initiative and funding amount

Linkage and Navigation Services for HIV+ and/or High Risk Negatives

- Service Target: [] unduplicated clients, annually
- Contractors must provide linkage and navigation services (assist HIV positive and/or high risk negative clients in obtaining timely, essential and appropriate HIV-related medical and social services to optimize his or her health and prevent HIV transmission and acquisition)
- At least 25% of clients enrolled must be HIV-positive individuals
- 75% of clients should be MSM, IDU, high-risk heterosexuals, and/or STD/HCV positive clients
- All clients receiving linkage and navigation must have evidence of an up to date risk assessment, linkage to care, treatment adherence assessments and viral load and/or CD4 levels documented as appropriate

The following activities should be included:

- provision of services that reduce and/or eliminate barriers to care and services, such as accompanying individuals to medical appointments, providing transportation services, etc.
- navigation to essential support services that complement biomedical and behavioral change prevention services
- active referrals, follow up, and confirmation of linkages for treatment adherence support, mental health, substance use, legal services, **QIEP** & **PiEC**, EBIs, etc.
- facilitation of treatment education/adherence support for HIV+ person and their partners
- optional: development of a peer mentoring program that supports the training of peers to assist in the care program model deliverables

[] = Minimum number of clients will vary depending on specific initiative and funding amount

Evidence Based Interventions for HIV+ and/or High Risk Negatives: High Impact Prevention (HIP) Interventions and Strategies

- Service Target: Dependent on intensity, services targets listed below
- A maximum of three HIP behavioral interventions can be implemented.
- At least 25% of clients enrolled must be HIV-positive individuals and 75% of clients should be MSM, IDU, and/or high-risk heterosexuals.
- 75% of clients who enroll must complete the intervention.
- Only supported EBIs may be selected, contractors may also choose to implement a homegrown intervention that addresses the 25 common factors as outlined in Attachment C – Risk Plan Summary; homegrown interventions must follow the same services targets as listed below for single-session, multi-session group, and multi-session individual.

Single-Session [] unduplicated clients, annually	Multi-Session Group [] unduplicated clients, annually	Multi-Session Individual [] unduplicated clients, annually
Practitioner-Counseling (PCC)*	Healthy Relationships*	ARTAS†
RESPECT‡	Contractor¶	DRCS‡
VOICE/VOICE‡	Group¶	Project (PART)‡
STIP in the City‡	PROSPER¶	CLEAR‡
Partnership for Health‡	ROL for MSM¶	
STIP to STIP‡	Mothership‡	
	Many Men Many Voices (M3V)¶	

* EBIs that are appropriate for adoption for the transgender population
 † Prevention with HIV Positive People
 ‡ Prevention with High Risk Negative
 ¶ [] = Minimum number of clients will vary depending on specific initiative and funding amount

Condom Promotion, Education and Distribution for HIV+ and/or High Risk Negatives

Condom distribution is a required component of all program models.

STD Testing & HCV Screening

Services Target: A minimum [] clients for STDs (GC, CT, &/or ST) &/or HCV, annually

Summary: Generic Program Model Option Requirements

Program Model	HIV Testing and Linkage to Care & HIV Care Services	Linkage and Navigation Services	Condom Promotion, Ed. & Distribution	Evidence Based Interventions	STD Testing & HCV Screening	Linkage to STD testing & HCV screening
1	YES	YES	YES	YES-2	NO	YES
2	YES	YES	YES	YES-1	YES	No direct method of collection = method of transmission
3	NO	YES	YES	YES-3 (at least one client)	NO	YES

[] This refers to the method of specimen collection being successful/appropriate given the reported method of transmission. Method of collection refers to urine specimens, swab/pouches, or vaginal, rectal, and/or pharyngeal swabs. Method of transmission refers to oral, vaginal, or anal sex and sharing injection drug equipment. For example if a client discloses sexual risk factors associated with early diagnosis of STDs (e.g., penile urethral, discarded when retesting) and they only seek a penile urethral, collecting a urine specimen will not detect STDs located in the mouth and the client should be referred for a pharyngeal swab (oral screening).

- Provider letter and guidance issued in 2014
- TA webinar conducted on October 14, 2014

Linkage and Navigation

- Linkage & Navigation (L&N) is a process of service delivery to help a person obtain timely, essential and appropriate HIV/STD/HCV- related medical and social services to optimize his or her health and prevent HIV transmission and acquisition

Goal is to minimize barriers to optimize linkage to, retention in, and re-engagement with care and prevention services

Linkage and Navigation

- L&N *consist of actively*:
 - linking persons to health care systems
 - assisting with health insurance and transportation,
 - identifying and reducing barriers to care, and
 - tailoring health education/prevention interventions to the client to influence his or her health-related attitudes and behaviors

Peer and paraprofessional navigation, Anti-Retroviral Therapy (ART) initiation and adherence, education and counseling, outreach and case management like approaches are recommended

- L&N *does not consist of*:
 - providing referrals without active follow up to ensure successful completion/access by client
 - information sharing

Linkage and Navigation - Target Population

- L& N Services Targets:
 - Persons Living with HIV and *High Risk HIV Negative Individuals*

 - Providers funded to implement L&N are expected to work with the target population(s) based on their contractual agreement

Work Plan (1)

Retention and Adherence in Services for HIV+ and/or High Risk Negatives (Staff and/or Peer Led)			
Objective	Budget Category	Task/Activities	Performance Measures
Link HIV+ clients to STD/HCV testing, medical care, treatment adherence, behavioral interventions, partner services and other support services as needed.	NA	<ul style="list-style-type: none"> Conduct brief risk screening, linkage to care assessment, and treatment adherence assessment for all HIV + clients enrolled in any prevention/ support service, prior to receipt of service(s). Ensure risk screen addresses STD and HCV. Address any issues raised during risk screening and, using a client-centered approach, assist the client to incrementally reduce risk taking behaviors and access/engage in treatment. Use information from the risk screen to provide or link clients to HIV/STD/HCV testing, medical care, adherence support, and services that address risk taking behaviors and/or facilitate adherence and retention. Record/update risk history (AIRS). Document referral and verify linkage. Facilitate treatment education/adherence support for HIV+ person and their partners. Ensure all HIV + clients have evidence of viral loads and/or CD4 levels (documented & in AIRS). 	100% of clients enrolled in funded services must be HIV-positive individuals
Identify, test and refer the sexual and syringe sharing partners of HIV + clients for treatment and prevention services, as appropriate.	NA	<ul style="list-style-type: none"> Routinely assess and discuss sexual and/or syringe sharing partners with HIV+ clients. Utilize motivational interviewing or other effective techniques to encourage the client to bring their sexual and/or syringe sharing partners in for an HIV test and/or risk reduction services. Test and refer partners for treatment and prevention services, as appropriate. 	50% of all HIV+ clients will bring in a sexual and/or syringe sharing partner for an HIV test and/or prevention services

This work plan objective was recently revised to reflect updated service definitions and ensure consistency across AIDS Institute data collection/ reporting requirements.

The old name: Retention and Adherence in Services. Task/activities to be implemented by agencies are comparable

Work Plan (2)

ATTACHMENT C – WORK PLAN SUMMARY

Linkage/Navigation Services for HIV+ and/or High Risk Negatives (Staff and/or Peer Led)			
Objective	Budget Category	Task/Activities	Performance Measures
Improve documentation of client level activities delivered to HIV+ clients.	NA	<ul style="list-style-type: none"> Ensure information for all HIV+ clients enrolled in any prevention/support service is included in the client file. At a minimum, this should include, a semi-annual detailed risk assessment, up to date current medical care/treatment including provider contact information, and signed releases for case conferencing with health/social service providers. Maintain progress notes within client files that detail any client level activity that has a specific focus on risk reduction behavior change and access/engagement in medical care. 	<p>100% of all files for HIV+ clients enrolled in prevention/support services will contain documentation and progress notes that detail incremental risk reduction behavior change and access/engagement in medical care/treatment</p> <p>100% of files for HIV+ clients will include a recent (within 6 months) CD4 count and viral load test results</p>
Develop and implement treatment Linkage/Navigation Services for high risk negative individuals at all stages of care to facilitate the provision of medical treatment and care and biomedical and/or behavioral change prevention services.	NA	<ul style="list-style-type: none"> Ensure all clients receiving Linkage/Navigation Services have evidence of an up to date risk assessment (documented and in AIRS) which addresses risk taking behaviors. Use information from risk screen to address prevention and support service needs and to develop a plan in support of changes to promote wellness and decrease risk taking behaviors. Ensure risk screen addresses client risks not just for HIV but also STD/HCV. Provide services that reduce/eliminate barriers to healthy behaviors and promote access to care and services (e.g., accompanying to medical appointments, transportation services, etc.) Assist clients in navigating and accessing essential support services that complement biomedical and behavioral change prevention services. Refer, follow up, and confirm linkages for treatment adherence support, mental health, substance use, legal services, nPEP & PrEP, EBIs. 	<p>75% of clients will be MSM, IDUs, high-risk heterosexuals, and/or STD/HCV positive clients.</p>

Revised Work Plan

Linkage/Navigation Services
As previously noted, services are comparable.
Name was changed to ensure consistency across AIDS Institute data collection/reporting requirements

- New map – “Linkage and Navigation” encounter 309 under Service Category 00053

Linkage and Navigation - Definitions

Code	Service	Definition
1144	Assistance with Access to Benefits/Entitlements	Provide information, or facilitate client linkage to benefits/entitlements
1269	CD4/Viral Load Lab Report Check	Obtain copy client's most recent CD4/viral load lab report and file in client's confidential record. CD4/viral load must also be updated in AIRS
72	Case Closure/Discharge	Client is no longer enrolled in the program or in need of services
1271	Comprehensive Behavioral Risk Assessment	Full assessment to determine if a client is engaged in HIV/STD/HCV high risk behaviors to identify appropriate interventions and services
238	Escort	Program staff or peer accompany a client to an appointment (HIV/STD/HEP C testing, medical care, entitlements, housing, substance use treatment etc.)
1291	Legal Support	Link client to direct legal support services

Code	Service	Definition
1292	Linkage to HCV Screening	Link client to Hepatitis C screening services, on site or at another provider.
1293	Linkage to HIV Testing	Link client to HIV testing services, on site or at another provider
1294	Linkage to PrEP	Link to a medical provider who will assess the client for appropriateness for PrEP and prescribe and monitor the client as indicated
1295	Linkage to Primary Care	Link client to medical services which include primary care, HIV medical care, STD/HCV treatment, and reproductive and sexual health services
1296	Linkage to STD Screening	Link client to STD screening services

Code	Service	Definition
1145	Prevention Counseling	Provide risk-reduction information and behavioral counseling to reduce behaviors that transmit HIV/STDs/HCV. Ensure linkage to PS, SE, and condom distribution
1146	Supportive Counseling	Provide an individual client or group of clients with behavior change/motivational counseling and supportive services. Ensure linkage to partner services
827	Translation/ Interpretation	Provide direct translation/interpretation services, or facilitate the provision of translation/interpretation services, for a client accessing services
1201	Transportation Coordination	Assess transportation needs of client and coordinate transportation (cab, train, subway, bus etc.) to facilitate access to HIV/STD/HCV related services
1310	Treatment Education and Adherence Counseling	Provide clients with education & counseling so they can self-manage their health and medication adherence in partnership with their health team
